Programming Languages
Python, Java, Kotlin, CPP, JavaScript, React Native and Bash

Conor O'Kelly

Professional Profile

Seasoned Software Engineer with over nine years of experience in backend development, data engineering, security, and technical leadership. Proven ability to lead and mentor teams, manage projects, and deliver high-quality software solutions across diverse technologies including C++, Java, Python and JS frameworks such as React.

Adept at fostering collaborative environments, driving best engineering practices, and optimizing infrastructure for performance and cost efficiency. Currently focused on trust, identity, and fraud prevention at scale.

Experience

04/25 - Now **Staff Software Engineer** Udemy, Dublin, Ireland

- Member of Udemy's Trust and Identity team, building secure, reliable systems that ensure safe access and user trust across the platform, from authentication flows to fraud prevention.
- Led a major fraud investigation, coordinating cross-functional efforts to identify and mitigate fraudulent activity at scale on the platform.
- Drove legal integrations for GDPR compliance across our fraud detection systems, ensuring regulatory adherence while maintaining effective fraud prevention capabilities.
- Led multi-engineer projects to address critical technical debt and launch new platform initiatives, improving system reliability and developer velocity.
- Contributed to mentoring and team education efforts, fostering engineering growth and knowledge sharing across the team.

05/22 - 03/25 **Senior Software Engineer & Team Lead** Parallel Domain, Vancouver, Canada

- Partnered closely with ML teams on data streaming and ingestion, building efficient network pipelines and processes to reduce latency for high-throughput systems.
- Used gRPC in live video game streaming pipelines that fed LLM training and verification systems.
- Worked closely with customer stakeholders on delivery: requirements, design documents, tickets, and communication through to handoff.
- Led a team of 3 engineers on C++ data pipelines for configuring and labeling synthetic data, with clean APIs for ML-driven customization.
- Owned cross-team delivery: node-based pipeline migration, minimum testing standards with unified CI, and customer-facing ML dataset formats via the Python SDK.
- Architected infrastructure improvements that reduced AWS cost by lowering memory and CPU footprint; collaborated with cross-functional teams to align technical solutions with business objectives; mentored engineers and promoted strong development, testing, and deployment practices.

03/20 - 05/22 **Senior Software Engineer & Team lead** Tasktop Technologies, Vancouver, Canada

- Spearheaded backend Java development projects, focusing on integrating third-party data APIs into the company's data ecosystem for real-time synchronization.
- Designed and implemented scalable architectures that facilitated efficient data retrieval and creation, supporting long-term maintenance and reducing technical debt.
- Led infrastructure initiatives to streamline development workflows, decrease developer friction, and automate common tasks.
- Served as Scrum Master, orchestrating daily stand-ups, sprint planning, and facilitating communication between engineering and product management teams.
- Mentored junior engineers and provided technical guidance, fostering a culture of continuous learning and improvement.

04/17 - 9/19 **Software Engineer** Murex, Dublin

- Developed an ETL pipeline using Spring Boot and AWS S3 to extract, transform, and load data, enriching existing datasets with internal sources before uploading to AWS S3.
- Participated in design and architecture discussions, contributing to the strategic direction and technical solutions of the ETL project.
- Implemented continuous integration and testing practices, collaborating closely with the QA team to ensure non-functional requirements (NFRs) were met.
- Developed full stack features within a self-organizing agile team, focusing on building and enhancing a new technology stack.
- Managed build pipelines through automated testing and continuous deployment, improving development efficiency and reliability.
- Led a web development club, organizing sessions to explore and experiment with emerging technologies, fostering a culture of innovation and continuous learning.
- Collaborated with cross-functional teams, ensuring seamless integration of front-end and back-end components and enhancing overall product quality.
- Trained as a Scrum Master and in Scaled Agile Framework (SAFe), applying these methodologies to improve team processes and project management.

Education

2018 - 2019 **Postgraduate Diploma in Cyber Security** National College of Ireland, Ireland
2.1 Second Class Honours
Relevant modules: Network security, IT law & ethics, cryptography, secure web programming, malware analysis.

2015 - 2017 **Master's Degree in Computer Science** University College Dublin, Ireland
GPA: 3.86 (1st Class Honours). **Modules:** software engineering, data analytics, algorithms, ML, multi-agent systems, advanced Java.

2010 - 2014 **Bachelor's Degree in Business and Economics** Trinity College Dublin, Ireland
Result: 2nd Class Honours Degree

Skills

Programming Languages	C++, Java, Kotlin, Python, JavaScript, Bash
Technologies	AWS, Docker, Kubernetes, React, Spring Boot
Data Engineering	Data Pipeline Design, ETL, SQL, NoSQL, DynamoDB
Leadership & Management	Team Leadership, Project Management, Mentoring, Technical Strategy
Others	Machine Learning Integration
Tools	Git, Jenkins, Jira, Confluence, Terraform
